

# Fidelis Okeke

## Software Engineer

Lagos, Nigeria

(+234) 9032295542 | [nwabuezeokekef@gmail.com](mailto:nwabuezeokekef@gmail.com)

### Summary

Software Engineer with over 4 years of experience in designing and developing high-performing applications. Skilled in front-end and back-end development with a proven track record of delivering scalable and efficient solutions. Proficient in modern JavaScript Technologies and Php Frameworks.

### Skills

HTML, CSS/CSS3, React.js, Redux, Next.js, Material UI, Bootstrap, SASS/SCSS, Tailwind, Figma, Node.js, Express.js, TypeScript, Nest.js, MySQL, PostgreSQL, MongoDB, GraphQL, PHP (Laravel GraphQL), Webflow, Framer, Builder

### Projects

#### TwistedFood (Food Blog)

- Created a backend blog service using laravel and GraphQL.
- Migrated the backend of the blog site from NodeJs Rest Api to GraphQL Api.
- Migrated the client facing application from using nextJs v9 to next13 and improved the website speed and metrics.
- Implemented SEO techniques and best practices to improve website seo ranking.

#### VT (Blog Website)

- Worked closely with the Design team to create the client facing application by transforming Figma Design into Code, while ensuring that the pages are responsive.
- Successfully implemented SEO techniques and best practices to improve the website search engine visibility and organic traffic.

#### Hivedeck (Admin)

- Worked with a team of software engineers to build a website builder platform.
- Created 3 templates by name Elegante, Eatup and Kiamoni Templates and integrated them into the template editor, the goal of this template is that users can customize these templates and use it to create webpages.

- Created the backend api for the form service using laravel and GraphQL. The goal of this service is to enable clients to create forms and use this created form to collect responses, it works similar to how google forms works but with this service, users of hivedeck can embed these created forms to their pages while creating or editing a web page.
- Created the PluginForm component to handle the integration of the forms into a template or a webpage.
- Created the client part of the form service. This will enable the users to manage their forms from the dashboard, i.e(create forms, add questions to a form and view responses).
- Created the Blog service using Laravel and GraphQL.The blog services is responsible for managing blogs.

#### **Hivedeck (Landing Website)**

- Worked closely with the Design team to create the client facing application by transforming Figma wire frames into Code using NextJs and Material UI makestyles, while ensuring that the pages are responsive and implemented all the animations using GSAP.
- Successfully implemented SEO techniques and best practices to improve the website search engine visibility and organic traffic.

### **Experience**

#### **Wazobia Technologies, London, UK**

Software Engineer, April 2023 - Present
